

## EARLY RELEASE AFTER SPAY

Main Street Veterinary Clinic routinely hospitalizes patients overnight after a spay surgery. Owners may take their pet home at the end of the day after surgery if they agree to the following postoperative care and monitoring:

- 1) strict inactivity tonight (preferably crated) and keep inside
- 2) keep other pets away from her tonight
- 3) any outdoor excursions must be on a leash
- 4) check the incision in the morning for swelling, redness, discharge, or signs of licking
- 5) make sure she eats, drinks, has normal urination and bowel movements
- 6) watch for excessive pain or discomfort

The owner will assume full responsibility for any postoperative complications and will not hold Main Street Veterinary Clinic liable professionally or financially. If any complications arise we will be happy to see your pet but a recheck exam fee will apply.
